

## Fully coated CTMP board with uncoated reverse

Performa Natura is a board with a three layer fibre construction and with CTMP (chemi-thermomechanical pulp) in the middle layer and a double-pigment-coated top side.

Issued: 02.2024  
Cancels: 09.2017

### Technical specification

Property / Unit	Tolerance									Standard
Grammage, g/m <sup>2</sup>	±4%	195	210	230	255	270	295	320	350	ISO 536
Thickness, µm	±4%	260	280	320	350	390	430	470	510	ISO 534

Robinson chocolate test		max 0.5 for one year storage in reels/pallet								EN 1230-2

OBA not added

# Performa Natura™

Fully coated CTMP board with uncoated reverse

## Certificates

- Quality management ISO 9001
- Environmental management ISO 14001
- Product safety FSSC 22000
- Occupational health and safety ISO 45001
- Energy management ISO 50001

FSC and PEFC certified board available upon request.

Industrially compostable according to EN 13432 standard.

For grammages ≤ 320g/m<sup>2</sup> home compostable according to TÜV Austria's Home composting certification scheme.

Paperboard can be recycled

## Key characteristics and main enduses

Performa Natura features a technically advanced structure for material efficiency, toughness, bulk and runnability. No optical brightening additives are used in production of Performa Natura. As an OBA non-added board Performa Natura is highly suitable for pharmaceuticals, food and chocolate packaging. This product is compostable in industrial and home composting and can be collected together with food waste in most collecting schemes.

## Printing and finishing techniques

The product can be used with different printing techniques such as offset, flexo and digital printing. In digital printing, the product is suitable for several different sheet- or web-fed presses. Dry or liquid toner technology can be used, although in some cases, pretreatment of the substrate might be required. The latest certification status can be verified on the press manufacturer's website or with local Stora Enso representatives. It is important to check the limitations of the equipment, particularly because of the exceptional difference in the thickness and stiffness of board compared with paper in the same grammages. When running thicker substrates, the press manufacturer's recommendations should be referred to for optimal grain direction. Essentially all of the same finishing processes apply to both digitally printed and offset printed work. Since a wide variety of digital printing equipment is available in the market, it is important that a new commercial print job is always preceded by a trial run, including all required printing and converting process phases. It is suitable for laser coding. Certificate according to PTS-DF 105/2019 is available upon request.

## Storage recommendations

For optimal printing results, the moisture proof wrapping should not be removed until the board has reached the temperature of the press room.

Pallet/Reel Weight (kg)	Difference in temperature between board and press room (press room temp. approx. 20°C)		
	10°C	20°C	30°C
400 kg	2 days	2 days	3 days
800 kg	2 days	3 days	4 days
1200 kg	2 days	4 days	5 days

The product properties, according to the specifications, are guaranteed for 12 months after the production date. In order to ensure product safety, the product must be well wrapped and stored indoors, sheltered from rain and snow. The recommended storage conditions are 50–55% relative humidity and 20–23°C.
